PROFESSIONAL SUMMARY

Full Stack Developer with **2 years of experience** building and shipping web and mobile products **to production** for real users. I own products end to end: requirements, Figma design, frontend (**Angular, React Native, Next.js**), backend (**NestJS, PostgreSQL, Redis**), app store releases and infrastructure (**Docker, CI/CD, Linux VPS, Cloudflare**).

I single-handedly built a delivery app published on the **App Store, Google Play and Huawei AppGallery**, and I maintain a **multi-tenant hotel platform** that serves two hotels and issues **DIAN-compliant electronic invoices** (Colombian tax authority) in production. I work directly with clients and business owners, turning real needs into maintainable software (strict TypeScript, modular architecture, SOLID). Looking to join a product team as a full stack or mobile developer.

KEY ACHIEVEMENTS

- **Shipped to 3 app stores:** Mándalo approved and live on the App Store, Google Play and Huawei AppGallery, with 140+ registered users.
- **Multi-tenant platform in production:** re-architected the Samawé system so the same backend and admin panel also serve Motel Crazy Love, each hotel as a separate organization with isolated data, its own domain and branding.
- **5 systems in production** used by real businesses: somosmandalo.com, ecohotelsamawe.com, crazylove.ecohotelsamawe.com, ranchoporvenirmocoa.com and lacasadelpintormocoa.com.

PROFESSIONAL EXPERIENCE

Mándalo — Delivery marketplace — Colombia (remote) · somosmandalo.com **Jun 2026 – Present**

Full Stack Mobile Developer (sole developer) | *React Native, Expo, NestJS, PostgreSQL, Redis, Socket.IO, Docker*

- Designed, built and published the app on my own (Android, iOS and web from a single codebase) with Expo, expo-router and NativeWind; passed Apple App Review (demo accounts, Sign in with Apple, account deletion).
- Built the backend with NestJS 11 + TypeORM + PostgreSQL, with 5 roles and per-municipality permissions.
- Implemented real-time chat with Socket.IO, background courier tracking and push notifications (FCM/APNs) through a custom native module written in Kotlin and Swift.
- Designed a distance-based pricing engine with night, rain (Open-Meteo) and demand surcharges, plus automated bi-weekly settlements for businesses and couriers.
- Run the infrastructure: Docker, Dokploy, CI/CD, Cloudflare, Redis and scheduled backups; EAS builds and updates. Validated the platform with 80 concurrent users and zero errors.

Eco Hotel Samawé — Colombia (remote) · ecohotelsamawe.com **Feb 2025 – Present**

Full Stack Developer (multi-hotel platform) | *Angular 19 + SSR, NestJS 11, PostgreSQL, Redis, Docker*

- Led the hotel management system end to end (lodging, restaurant, tours, inventory and billing): from requirements and Figma prototypes to deployment. Sold the solution to the client.
- Integrated Colombian electronic invoicing (DIAN) through Factus API v2 (sales invoices, credit and debit notes, support documents and adjustment notes), issuing in production.
- **Turned the system into a multi-tenant, multi-hotel platform:** the request's domain resolves the organization; 84 routes enforce ownership (another hotel's record returns 404), inserts are always scoped to a hotel, and the admin panel has per-hotel login and branding. It now serves Samawé and Crazy Love as separate organizations.
- Built online guest bookings with availability, staff payment confirmation and automatic release after 24 hours.
- Built the public website with Angular SSR, technical SEO, Spanish/English and dark mode; set up Google Search Console.
- Added a restaurant module with recipes and inventory, credit sales with partial payments, PDF and Excel reports, Redis-based scaling and an Electron desktop version.

Motel Crazy Love — Colombia (remote) · crazylove.ecohotelsamawe.com **Oct 2026**

Full Stack Developer | *Next.js 16, Tailwind CSS 4, NestJS, PostgreSQL (multi-tenant)*

- Onboarded the motel as the second organization on the Samawé platform: same backend, database and admin panel, with its own data, domain, colors and admins, without duplicating infrastructure.
- Built its digital menu in Next.js 16 for the in-room QR code: rooms with hourly rates (re-sorted by price for the chosen stay length), services and a searchable menu, shareable item sheets and light/dark mode.
- Added hourly rates (1–72 h) and per-room parking options to the backend.

Rancho Porvenir — Eco hotel — Colombia (remote) · ranchoporvenirmocoa.com **Oct 2026**
Full Stack Developer | *Next.js, React, NestJS, PostgreSQL, Zod, Vitest, Docker*

- Built the website and admin panel from design to deployment: visitors build their plan, see the estimated total and send it to the business's WhatsApp with a pre-filled message.
- Implemented a per-night pricing engine (weekdays, weekends, seasons and Colombian public holidays), covered by Vitest tests; httpOnly-cookie sessions with rotating refresh tokens, and SEO with Server Components.

La Casa del Pintor Mocoa — Colombia (remote) · lacasadelpintormocoa.com **Apr 2026 – May 2026**
Full Stack Developer | *Angular, Tailwind CSS, NestJS, PostgreSQL*

- Designed and built a product catalog with an admin panel so the business manages inventory, categories and images without relying on a developer; set up Google Search Console.

IPUC — United Pentecostal Church of Colombia — Colombia (remote) **Feb 2025 – May 2025**
Full Stack Developer | *Angular, NestJS, PostgreSQL, JWT, Swagger*

- Built the institutional website with a community forum (posts, nested comments, profiles) and its REST API with JWT, Swagger and email notifications.

REMAKE — eSports platform (Dota 2) — Lima, Peru (remote) **Jan 2025 – Feb 2025**
Frontend Developer | *Angular, TypeScript, SCSS, RxJS*

- Set up the Angular frontend architecture from scratch, built views from Figma designs and consumed the OpenDota API for real-time match stats, working with the team through Git.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Java, Python, Kotlin

Frontend: Angular (SSR, RxJS, Angular Material), React, Next.js, Tailwind CSS, HTML, CSS/SCSS, Astro

Mobile: React Native, Expo (EAS, expo-router), NativeWind, native modules (Kotlin/Swift), push notifications (FCM/APNs), Google Maps, Electron

Backend: NestJS, Node.js, Express, Spring Boot, FastAPI, REST APIs, WebSockets/Socket.IO, JWT, OAuth 2.0, TypeORM, Swagger, Cron Jobs, multi-tenant architecture, DIAN e-invoicing (Factus), Cloudinary, SMTP

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, Supabase

DevOps & infrastructure: Docker, Dokploy, CI/CD, Linux VPS, Nginx, Cloudflare, Firebase, Google Cloud, Netlify, Vercel

Publishing: App Store Connect, TestFlight, Google Play Console, Huawei AppGallery, Google Search Console

Tools: Git, GitHub, Vitest, Postman, Figma, Notion, AI-assisted development tools

EDUCATION

B.S. in Systems Engineering (9th semester, in progress) Aug 2025 – Present
Institución Universitaria del Putumayo — Mocoa, Colombia

Associate Degree in Software Development (GPA 4.1/5.0) Feb 2022 – Jul 2025
Institución Universitaria del Putumayo — Mocoa, Colombia

Technical Diploma in Computer Systems Jan 2017 – Dec 2021
POLINTEC — Mocoa, Colombia

COURSES & CERTIFICATIONS

Programming Fundamentals in Kotlin — Meta / SENATIC (Coursera), 2024 • Foundations of User Experience (UX) Design — Google (Coursera), 2023 • Start the UX Design Process: Empathize, Define, and Ideate — Google (Coursera), 2023 • Effective Problem-Solving and Decision-Making — UCI / SENATIC, 2025

ADDITIONAL EXPERIENCE

Network & IT Support Technician (independent) — Colombia May 2026 – Sep 2026
Mocoa Courthouse, UNAD University (Puerto Asís), ARN, Energía del Putumayo, La Previsora

- Installed switches (including a fiber switch), access points and Windows Server workstations; organized racks, data points and port mapping.

Ferrecom La Modelo — Mocoa, Colombia Nov 2022 – Feb 2023
Sales and Administrative Assistant: e-invoicing, inventory and cash reconciliation in Siigo
