PROFESSIONAL PROFILE

Full Stack Developer with 2+ years building and deploying web and mobile applications end-to-end. I work across the Angular / TypeScript and React Native (Expo) ecosystems on the frontend, with a solid backend in NestJS, TypeORM and PostgreSQL. I have taken complete products from requirements gathering and Figma prototyping through to production, also managing the infrastructure: Docker containers, CI/CD, VPS servers, DNS and Google Play publishing. I have additionally delivered desktop applications with Electron. Currently pursuing a Systems Engineering degree. I stand out for technical quality (Clean Code, SOLID) and for connecting every technical decision to the client's real business need.

PROFESSIONAL EXPERIENCE

Mandalo — Freelance · somosmandalo.com

Putumayo, Colombia (Remote)

Full Stack Mobile Developer

July 2026 – Present

Multi-role delivery marketplace for the Putumayo region. Sole developer, end-to-end: mobile application, web version and infrastructure.

- Built and published the application on Google Play using React Native + Expo, managing the store listing, policy compliance and the review process.
- Designed a multi-tenant architecture with 5 roles (superadmin, regional admin, business, customer and courier), with per-municipality access control enforced in the backend, not just in the UI.
- Built the delivery pricing engine: real-distance calculation with dynamic surcharges for night hours, weather conditions and high demand.
- Implemented real-time features with WebSockets: per-order chat, background courier tracking and push notifications via Firebase FCM.
- Automated bidirectional bi-weekly settlements (charges to businesses and payouts to couriers) with reports broken down by year, month and period.
- Manage the full infrastructure: Docker containers orchestrated on Dokploy with a private image registry, CI/CD pipelines, separate development and production environments, DNS and CDN configuration on Cloudflare, Redis caching and automated backups.
- Sustained 80 concurrent users with zero errors in load testing and reduced dashboard loading from 7 requests down to 1.

La Casa Del Pintor Mocoa — Freelance · lacasadelpintormocoa.com

Mocoa (Remote)

Full Stack Developer

May 2026 – Present

- Designed the architecture, requirements and Figma prototypes from scratch for a dynamic product catalog, fully manageable by the client.
- Developed the backend with NestJS + TypeORM + PostgreSQL and the frontend with Angular + Tailwind CSS, and configured Google Search Console to optimize indexing and search visibility.
- Integrated Artificial Intelligence tools into the development workflow, boosting productivity and the quality of the delivered product.
- Led client meetings, defining scope, priorities and deliverables in each iteration.

Eco Hotel Samawé — Freelance · ecohotelsamawe.com

Mocoa (Remote)

Full Stack Developer

March 2025 – Present

Over a year as the client's trusted developer, across three successive product phases.

Accounting and administrative system · Mar – Nov 2025

- Designed and developed the complete application, from requirements gathering and Figma prototypes through to production deployment with CI/CD.
- Implemented a comprehensive admin panel for products, guests, employees and users with automated billing, direct invoice printing, accounting reports and data export.
- Built JWT authentication, role management and bcrypt hashing on a modular NestJS architecture applying SOLID, DTOs and validations.
- Delivered the system on both web and desktop: packaged an Electron version to guarantee the hotel's operation without an internet connection.
- Sold and implemented the solution to the end client. Result: the hotel centralized its administrative and accounting processes, eliminating manual spreadsheets.

Restaurant module · Jan – Mar 2026

- Extended the system with menu, order and table management, with billing integrated into the existing accounting system.

Public landing page and online booking · Apr 2026 – Present

- Developed the landing page with a multitenant architecture and end-to-end internationalization, implemented in both backend and frontend.
- Implemented the payment gateway for online bookings, integrating the system with Booking and Airbnb.
- Configured Google Search Console, improving SEO ranking and organic site visibility.

Cineclub+ — Academic Project

Mocoa (Remote)

Frontend Developer

August – December 2025

- Led the frontend development of a film community platform with Angular and Tailwind CSS, implementing a recommendation system, comment threads, post reactions and a module for sharing and requesting movies.
- Integrated WebSockets for real-time notifications and dynamic updates of user activity.
- Connected the interface to a Spring Boot backend (PostgreSQL/Supabase), handling security through OAuth 2.0 and JWT.
- Developed the admin panel for content moderation and role management.

IPUC — Freelance

Full Stack Developer

Mocoa (Remote)

March – June 2025

- Developed the complete web application for the United Pentecostal Church of Colombia community with Angular + Tailwind and NestJS + TypeORM + PostgreSQL, with responsive interfaces based on the provided designs.
- Implemented a community forum with posts, comments and nested replies, along with the REST APIs for authentication and content management.
- Created customizable user profiles with detailed participation statistics.

REMAKE — Freelance

Frontend Developer

Lima, Peru (Remote)

December 2024 – February 2025

- Bootstrapped and structured the Angular frontend project from scratch, defining the global style hierarchy with SCSS variables and configuring Angular Material, routing and HTTP services.
- Consumed external APIs to display real-time statistics and match data for Dota 2 games, and collaborated with the team on view integration and user betting logic.

ProjectZen — Academic Project

Frontend Developer Trainee

Mocoa (Remote)

August – December 2024

- Developed responsive user interfaces with Angular + Bootstrap consuming APIs from a NestJS backend, integrating reusable components optimized for SEO.
- Participated in technical code review meetings and collaborative Git workflows.

TECHNICAL SKILLS
