

Professional Profile

Systems Engineer and Full Stack Developer with 2 years of experience designing, developing and deploying scalable web applications end-to-end. Proficient in the Angular and TypeScript ecosystem for building modern, high-performance interfaces with Tailwind CSS, complemented by a solid backend in NestJS, TypeORM and PostgreSQL. I integrate Artificial Intelligence tools into my workflow to accelerate development and elevate the quality of the final product.

I have led complete freelance projects —from requirements gathering and Figma prototyping to production deployment with CI/CD and Google Search Console—, delivering administrative systems, product catalogs, multitenant landing pages and payment gateways. I stand out for technical quality (Clean Code, SOLID) and a comprehensive business vision that allows me to connect each technological solution with the client's real needs.

Education

Institución Educativa Pio XII

High School Diploma

Mocoa, Putumayo
January 2010 – December 2021

POLINTEC

Technical Diploma in Computer Systems
2021

Mocoa, Putumayo
January 2017 – December

Institución Universitaria del Putumayo

Associate Degree in Software Development

Mocoa, Putumayo
February 2022 – July 2025

Institución Universitaria del Putumayo

Systems Engineering

Mocoa, Putumayo
August 2025 – Present

Development Experience

[La Casa Del Pintor Mocoa](#) – Freelance

Full Stack Developer

Mocoa, Putumayo (Remote)
May 2026 – Present

- Designed the architecture, requirements and Figma prototypes from scratch for a complete product catalog for the La Casa Del Pintor Mocoa business.
- Developed the backend with NestJS + TypeORM + PostgreSQL and the frontend with Angular + Tailwind CSS, delivering a functional, high-performance system.
- Led client meetings to define scope, priorities and deliverables in each project iteration.
- Integrated Artificial Intelligence tools into the development workflow, boosting productivity and the quality of the delivered product.
- Configured Google Search Console for [lacasadelpintormocoa.com](#), optimizing indexing and search engine visibility.

[Samawé](#) – Freelance

Full Stack Developer

Mocoa, Putumayo (Remote)
April 2026 – Present

- Development of the Eco Hotel Samawé public landing page with multi-language support and multitenant architecture.
- Implementation of a payment gateway for online bookings, integrating the system with external reservation platforms (Booking and Airbnb).
- Configuration of Google Search Console for [ecohotelsamawe.com](#), improving SEO ranking and organic site visibility.

[Samawé](#) – Freelance

Full Stack Developer

Mocoa, Putumayo (Remote)
January 2026 – March 2026

- Designed and developed the restaurant module for the Eco Hotel Samawé administrative system, expanding the business management capabilities.
- Implemented menu management, orders, tables and billing integrated into the existing accounting system, using

Jhon Jairo Legarda Erazo

Angular + Tailwind CSS and NestJS + TypeORM + PostgreSQL.

Cineclub+ (Blog & Film Community) – Academic Project

Mocoa, Putumayo (Remote)

Frontend Developer

August 2025 – December 2025

- Led the frontend development of "Cineclub+", a social blog-like platform, designing an interactive and modern interface with Angular and Tailwind CSS.
- Implemented advanced community features: recommendation system, comment threads, post reactions and a module for users to share and request movies.
- Integrated WebSockets for real-time notification management and dynamic updates of user activity.
- Connected the interface with a Spring Boot backend (PostgreSQL/Supabase), handling security through OAuth 2.0 and JWT for authentication and session management.
- Developed a complete admin panel for content moderation, role management and community administration.

Samawé – Freelance

Mocoa, Putumayo (Remote)

Full Stack Developer

March 2025 – November 2025

- Designed and developed a complete accounting and administrative application for Eco Hotel Samawé, covering from requirements gathering to implementation and production deployment.
- Created functional prototypes in Figma and defined the technical architecture using Angular + TailwindCSS on the frontend and NestJS + TypeORM + PostgreSQL on the backend.
- Implemented a comprehensive admin panel with product, guest, employee, user management and automated billing.
- Developed a secure authentication system with JWT, including registration, login, role management and password hashing with bcrypt.
- Built a billing module with direct invoice printing, dynamic filters, accounting reports and data export.
- Designed a modular architecture in NestJS, applying SOLID principles, DTOs, validations and efficient relational entity management.
- Configured the cloud production environment, including CI/CD pipelines for continuous deployment and version control with Git.
- Successfully migrated the web application to a desktop version with Electron, optimizing the user experience for offline environments.
- Sold and implemented the solution to the end client, delivering a functional, maintainable system tailored to the hotel's accounting and operational needs.
- Result: the application enabled the hotel to centralize its administrative and accounting processes, improving operational efficiency and eliminating the use of manual spreadsheets.

IPUC – Freelance

Mocoa, Putumayo (Remote)

Full Stack Developer

March 2025 – June 2025

- Developed a complete web application for the United Pentecostal Church of Colombia community using Angular + Tailwind and NestJS + TypeORM + PostgreSQL.
- Implemented responsive user interfaces based on provided designs, optimized for multiple devices.
- Created informational sections about the church: history, doctrine, ministries and congregational events.
- Used strict typing and development best practices to ensure code maintainability.
- Implemented a complete community forum system with posting, comments and nested replies.
- Developed REST APIs for forum backend management, user authentication and content handling.
- Created customizable user profile system with detailed participation statistics (likes, comments, posts).
- Used Git for version control and collaborative development team workflows.

REMAKE – Freelance

Lima, Perú (Remote)

Frontend Developer

December 2024 – February

2025

- Bootstrapped and structured the frontend project using Angular from scratch.
- Configured Angular global styles and SCSS variables for a proper style hierarchy.
- Implemented user interfaces according to designs provided in Figma.
- Installed and configured key dependencies for the project architecture (Angular Material, routing, HTTP services, etc.).
- Consumed external APIs to display real-time statistics and match data for Dota 2 games.

Jhon Jairo Legarda Erazo

- Used strict typing and interfaces to ensure greater maintainability and code control.
- Collaborated with the team on view integration and basic logic for user betting features.

ProjectZen – Academic Project

Frontend Developer Trainee
2024

Mocoa, Putumayo (Remote)
August 2024 – December

- Developed responsive user interfaces using Angular + Bootstrap.
- Displayed dynamic information in the interface through backend API consumption (NestJS).
- Used Git for version control and collaborative team workflows.
- Participated in technical meetings for code review and continuous improvement.
- Contributed to the integration of reusable components to optimize the application SEO.
- Implemented best practices using strong typing and interfaces to improve code maintainability.

Commercial and Administrative Advisor – FERRECOM LA MODELO

Sales Assistant

Mocoa, Putumayo (On-site)
November 2022 – February 2023

- Administrative and accounting management using **Siigo** software, handling electronic invoicing, inventory control and cash reconciliation.
- Customer service and technical sales advisory, achieving customer loyalty and meeting commercial goals.
- Warehouse logistics organization and merchandise dispatch process optimization.

Technical Skills

Frontend

- Angular, React, Astro, HTML, CSS, SCSS, Tailwind CSS, Bootstrap, Angular Material, Wix, Websockets.

Backend

- NestJS, FastAPI, Spring Boot, Node.js, express, JWT, bcrypt, TypeORM, Migrations.

Databases

- PostgreSQL, MySQL, MongoDB

Tools

- Git, GitHub, VS Code, Figma, Chart.js, NGX, HeroUI, Swagger, Postman, Docker, Scalar, Google Search Console, Electron.

Programming Languages

- TypeScript, JavaScript, Java, Python, Kotlin, PHP.

Management & Productivity

- Notion, Excel, Word, PowerPoint, Supabase.
